

ENVIRONMENTAL POLICY CLUB NÁUTICO SERRANOVA

The Company's Management board of the Club Náutico Serranova is aware of the consequences on the environment caused by all the activities that take place in its facilities, which is why it is considered necessary to develop an Environmental Management System according to ISO 14001 regulations. Management of the Yacht Club will be carried out:

- ⇒ Considering the **environmental aspects**, related to its activity, in all phases of its development, from the beginning to the end of the cycle, to minimize the adverse effects produced by these and promote a rational use of resources and **prevent pollution**.
- ⇒ Ensuring the commitment to **comply with applicable environmental legislation**, the requirements of international reference standards and other commitments signed by the Organization
- ⇒ Carrying out the **necessary environmental awareness tasks** on the users and agents who carry out their activities in the facilities.
- ⇒ Providing training in **environmental matters** to employees who require it, as well as adopting all appropriate measures to safeguard the marine environment, fauna and flora that surround us.
- ⇒ Periodically reviewing the environmental management system in order to detect weak points, defining and ensuring objectives that allow us to achieve **continuous improvement** in environmental management and documenting the progress made
- ⇒ Periodically reviewing the degree of effectiveness of the implemented Management System, in order to detect weak points and be able to adopt the necessary and improvement actions.

This policy thus becomes the reference framework for establishing and reviewing environmental goals and objectives, it is documented, implemented, maintained, and communicated to all interested parties.
